

## Cracking/Collapsing on Bridger Ridge

Bridger Peak  
Bridger Range  
1/18/2020  
Code  
Elevation  
8500  
Aspect  
SE  
Latitude  
45.77010  
Longitude  
-110.94000  
Notes

From obs: "Observed whumping and cracking on a slope <25 degrees, E-SE facing. We were on top of the ridge in a safe place, but it was easy to see how a steeper slope could be triggered by someone on more mellow terrain below or off to the side. While traversing the ridge from the M to Bridger we observed multiple (past) [cornice](#) collapses that triggered small or no slides, but also a larger [slide](#) in the pinnacles."
