

We toured up to Flanders Mtn and saw a big, deep 2-6' deep avalanche that broke 300-500' wide in weak snow at the bottom of the snowpack. It broke across two separate start zones and included a lower angle ridge (still around 30 degrees) in between that slid. E-NE aspect at 9,800'. HS-N-R3-D3-O. Photo: GNFAC

Advisory Region Northern Gallatin Longitude -110.94W Latitude 45.44N

**Avalanche Details:** Natural deep slab avalanche, Flanders Mtn Northern Gallatin, 2024-03-30
