

ECTP18 in Absarokas

Date

Sun, 03/23/2025 - 15:00

Activity

Skiing

We got an ECTP18 result on a north aspect at 8600' in the absarokas. It propagated on a small layer of facets 30cm down. We did not get any collapsing nor see signs of naturals or other activity on this layer, but we stuck to non-wind loaded slopes in the trees.

Region

Out of Advisory Area

Observer Name

Charlie von Avis
